International Student Scholarship

The Physics Department of the University of Northern Iowa (UNI) has established the International Talent Scholarship Program. This program involves the following components:

A. Select students who are interested in physics to enroll in a UNI physics program and study for a degree in physics.

B. Organize a variety of academic activities for the students. These activities will allow the students to be exposed to the forefront of physics research. The activities include:
   1. Participation in seminars on a variety of current physics research topics.
   2. With the recommendation of UNI Physics Department Head, the students will have the opportunity to visit and conduct research at cooperating international research institutions.

UNI will work with international agencies to recruit students for this program. In the People’s Republic of China, the U.S. Eastwest International Education Academy (EWEA) will partner with UNI to provide opportunities to conduct research at institutions including Tsinghua University, Peking University, Renmin University of China, and the Institute of Physics, Chinese Academy of Sciences.

Scholarships will be awarded on the basis of outstanding performance in the UNI physics program.
